DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-20, drawn to body brace, classified in class 602, subclass 19.

II. Claims 21-30, drawn to a hinge, classified in class 15, subclass 84.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claim 1 does not include the structural elements first and second contact surfaces associated with first and second plates, the second contact surface being defined by an adjustable element associated with the second hinge plate as recited in claim 21. The subcombination has separate utility such as a hinge for connecting a door (first element) to a door frame (second element) or connecting an easel (first element) to a stand (second element).

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3764

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
